

Soluvit® N Powder for Injection

Consumer Medicine Information

What is in this leaflet

This leaflet answers some common questions about SOLUVIT N. It does not contain all the available information. It does not take the place of talking to your doctor or pharmacist.

All medicines have risks and benefits. Your doctor has weighed the risks of you or your child given SOLUVIT N against any benefits they expect it will have for you or your child.

If you have any concerns about taking this medicine, ask the doctor or pharmacist.

Keep this leaflet.

You may need to read it again.

What is Soluvit N used for

SOLUVIT N is a sterile concentrate which provides the body with water-soluble multivitamins by the intravenous route.

When the intake of nutrients or food into the mouth or directly into the gut is not possible, or it is not enough to supply the body's needs, then intravenous nutrients or foods can be given. This is especially important for people whose bodies are under physical stress from illness or recent surgery. During illness or after surgery the body requires nutrition or food.

It is usually given together with fats, amino acids, glucose and trace elements to provide a complete intravenous diet.

Before you are given Soluvit N

When you must not take it

- if you or your child are allergic to the ingredients of this medicine. If you develop a rash or other allergic reactions (like itching, swollen lips or face, or shortness of breath), inform your doctor immediately

Before you start to take it

Talk to your doctor if you or your child has problems with the way your liver or kidneys work or have an allergy to any other medicines.

Pregnancy and breast-feeding

Soluvit N can be used by pregnant and breast-feeding women.

If you are pregnant or breastfeeding, think you may be pregnant or planning to have a baby, ask your doctor for advice before using this medicine.

Taking other medicines

Tell your doctor or pharmacist if you are taking, have recently taken or might take any other medications.

How to take Soluvit N

How much to take

The dose of SOLUVIT N will be determined by your doctor.

The doctor will supervise your or your child's treatment with SOLUVIT N.

How to take it

This medicine will be administered by a healthcare professional. You will receive your medicine by infusion (drip) into a vein. SOLUVIT N should be dissolved first and then diluted for single infusion only.

SOLUVIT N is usually mixed in the bag of amino acids, glucose and/or fats, fat-soluble vitamins and given as a continuous infusion into a central vein. An electronic pump may be used to control the speed of the infusion of drip.

Side Effects

Since SOLUVIT N has to be diluted with other nutrient solutions, it may cause unwanted effects in some people.

Shivering, chills and nausea and vomiting occur in less than 1% of people who use it. Reports of other unwanted effects caused by SOLUVIT N are extremely rare.

Unwanted effects which have been reported to occur immediately or soon after a nutrient solution has been given include: allergic reactions (skin rash and hives); breathing difficulties (rapid breathing, shortness of breath); effects on blood pressure; abdominal pain; tiredness; headaches; flushing; slight pressure over the eyes and dizziness.

If you or your child have/has these or any other unwanted effects during treatment, tell his/her doctor.

If you are given too much (overdose)

This rarely happens as SOLUVIT N is administered under the care of a trained professional in a hospital or clinic setting.

However if you think that you have received too much SOLUVIT N, inform your doctor or nurse immediately.

You can also Contact the Poisons Information Centre in your country.
